

HealthNet

by 2BD

Daniel Dang, Colin Fausnaught, Raasin Siddiq, Bill Tarr, Barry Wu

Hello!

We are 2BD, aka 'f261-05b'.

We are here to tell about what we've been working on for the past 15 weeks.

Agenda

What is it?

Questions?

1

What is HealthNet ?

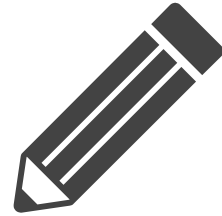

Our Product

- designed to help enable hospitals to manage employees and patients
- seeks to provide a mechanism that manages employees, gathers statistical data, register patients, sets up appointments, and stores patient information like their electronic medical record
- easy-to-use and intuitive interface.

2

Key Features

Key Features

- 4 different types of users:
 - patients
 - doctors
 - nurses
 - admins
- each type of user has their own permissions and access to different features

How a patient can use the site

- view and edit their profile containing general information
- view generic medical information
- view their electronic medical record
- export that page to a printer-friendly page
- track your history of surgeries, test results, and prescriptions
- manage appointments with your doctor

How a doctor and nurse can use the site

- view their patients' profiles, view their doctor's patients' profiles
- export and update their patient's page to a printer-friendly page, so that they can refer to it during an appointment
- make a history of surgeries, test results, and prescriptions
- manage appointments with your patients
- transfer patients between hospitals
- notify patient if you transfer to let them know to pick new doctor
- send messages between coworkers

How an administrator can use the site

- view and track the logs of the system
- view and track the statistics of the system
- populate the system with a .csv file
- create different account types
- manage profiles
 - view active and inactive profiles, as well as toggle them
- add hospitals to the system
